Guided Colton out
 Backed combine into the shop again
 Drained 1.5 buckets of coolant
 Disconnected coolant tank hoses
 Took the shields and steps off around engine bay
 Took the top half of the fan shroud
 Took off engine fan
 Took off engine fan belt and tensioner bolt
 Took off engine fan pulley and tensioner bracket
 Used an H bar puller to take off engine fan pulley
 Took off fan belt tensioner
 Took out snap ring and front pulley bearing
 Used a cutting wheel to cut the inner race of the back pulley bearing
 Cleaned fan pulley of metal shavings from the broken bearing
 Used the hydraulic press to put the fan pulley bearings in
 Hit the old tensioner bushings out and installed 3 new ones
 Put the tensioner on the bracket
 Put the tensioner and the bracket back on
 Put the fan pulley back on
 Put the tensioner bolt back in
 Tried putting the new fan belt on but the belt was too small
 The pulley was upgraded to a high speed fan pulley which needs a bigger belt
 Returned the new belt and got one ordered from Milk River
 Got the new belt and compared the new belt to the old, it is the correct belt
 Put the belt on and set the belt tension

Disconnected the electrical plug on the gearbox
 Took out the gearbox bolts
 Could not move the gearbox past the hydraulic lines
 Took the hose clamp off and moved the lines
 Pried the gearbox out and put it on the floor
 Held the sprocket up while colton took the bolt out of the left side
 Dropped the sprocket down
 Got the new sprocket and chain from parts
 Lifted the new sprocket into place
 Got colton to put the bolt in the left side
 Used an air gun to blow off the gearbox and where the gearbox sits on the feeder house
 Lifted the gearbox back into place
 Tightened the gearbox down and connected the electrical plug
 Tightened the nut on the left side
 Put the hose clamp back on
 Put the drive shafts back on
 Opened the top cover on the feed house
 Used a ratchet strap to grab the top of the feeder chain that fell down
 Connected the old feeder chain again
 Buffed the paint off the sides of the rear floor piece
 Lifted the floor piece up, it got stuck and had to be hammered all the way into place
 Took the front face off the feeder house
 Rotated the chain until the links were at the front
 Connected the new feeder chain to the old one
 Rolled the chain over until the new chain was all the way

DRIVE CHAINS

COMPLAINT:

- REPLACE UNLOAD AUGER CHAIN
- REPLACE CLEAN GRAIN DRIVE CHAIN
- REPLACE BUBBLE UP DRIVE CHAIN

CORRECTION:

Took off one of the unloading auger chains
 The new chain was the 80 heavy chain for single drive unloading augers instead of the 60 heavy for double drive
 Found the correct chain
 Went to parts and ordered the correct chain
 Took the second unloading chain off
 Took both other chains out of the box
 One chain was for the clean grain and the other was for the bubble up drive
 Went to parts, found the correct chain for the second unloading chain
 Made up a quote with the 2 correct chains compared to the single chain that was wrong
 The two chains were cheaper than the single chain
 Got one of the correct auger drive chains
 Put one of the correct chains on and set the chain tension
 Took the bubble up belt off
 Took the bubble up chain off
 Put the new bubble up chain on
 Tightened the bubble up chain
 Put the bubble up belt on
 Tightened the bubble up belt
 Took the clean grain chain off

SHOE ROLLERS

CORRECTION:

Went through the parts box

~~Found only 1 hinge and bearing were ordered~~

Went to parts to get the second set of hinge and bearing

Removed right hand roller holder

Took old roller off the holder to use the spacers

Put 2 spacers on the new hinge

Put the bearing on the hinge

Put 1 spacer on top of the bearing and put the snap ring on the hinge

Put the new RH roller on

Repeated the same steps for the left side

Had Colton pry the frame so the space was the same on each side to set the new rollers

Measured the space on each side

The space was the same on each side

BUBBLE UP AUGER

COMPLAINT:

AUGER IS WORN OUT AND NEEDS REPLACED ALSO REPLACE BEARINGS WHEN CHANGING THE AUGER

CORRECTION:

Took the 6 bolts holding the bubble up auger onto the tube
 Hooked the crane up to the auger
 Tried pulling the auger out of the tube but the auger would not come free
 Used a pry bar to get the auger free from the splines but the auger was still stuck
 Put the auger back down to pry from a different angle but ~~it was still stuck~~
 Lifted the auger back up and hooked up the crane again
 Put tension on the auger and shook it and pried the auger until it finally popped loose
 Lifted the old auger out
 Took the bearing off so i could switch the auger holder to the new one
 Looked through the cpo augers and found one in good shape
 Cleaned the bearing shaft of the auger with emery cloth
 Put the auger and bearing holder on
 Put the bearing on
 Tightened the bearing and auger holder
 Put the new auger into the tube
 Tightened up the auger holder

CHOPPER SHIFT/TENSIONER

COMPLAINT:

CHOPPER SHIFT IS BINDING FREE UP
CHOPPER TENSIONER PULLEYS ARE STICKING

CORRECTION:

Loosened the chopper belts
Took the belt guard off
Took the tension bolts off the tensioner pulleys
Tried taking the tensioner pulleys off
Sprayed deep creep in the tensioners before going for lunch
After lunch the pulleys were still seized
Used a hammer to move the pulleys as far as they would go
Twisted the belts off the tensioner pulleys and took the belts off
~~Sprayed more deep creep in tensioners~~
Used the hammer again to try to get the tensioners loose
Could not get a puller on the tensioners
Took the chopper pulley bolt out
Hammered a pry bar between the chopper pulley and the

tensioner bracket to take the pulley off
 The pulley did not move
 Grabbed another pry bar and wedged it in the other side of the pulley
 The pulley broke from the tension of the pry bar between the pulley and the bracket
 Hammered the pry bar back behind the tensioner pulley
 Used a second pry bar on top of the pulley
 The pulley came loose
 Took the chopper pulley off
 Took the tensioners and tensioner bracket off
 Matched up a bolt to put in the tensioner bracket
 Put the tensioner pulleys in the vice and hammered on the bolt
 The bracket started moving out of the tensioners
 Used an air hammer on the bolt after a regular hammer no longer moved the bracket
 Got the first tensioner off the bracket with the air hammer
 Found the bolt head broke off while taking the first tensioner off
 Cleaned the shaft on the bracket where the first tensioner was
 Sprayed the second tensioner with deep creep
 Put the tensioner in the vice and put a piece of wood on the bracket to hammer the bracket out of the tensioner
 The tensioner moved about an inch and then stopped
 Sprayed more deep creep and re positioned the tensioner in the vice and hammered the bracket out of the tensioner
 Tried to use an extraction kit to take the broken bolt out
 Would not come out
